Br

- 5. (Amended) The apparatus of claim 1, wherein each of the antennas is <u>configured</u> to be coupled to the electromagnetic energy source.
- 15. (Amended) The apparatus of claim 1, wherein the antennas are RF electrodes

 configured to be coupled to [and the electromagnetic energy source is] an RF energy source.

BU

26. (Amended) The apparatus of claim [24] <u>25</u>, wherein the cooling medium is recirculated through the channel.

SUB

27. (Amended) An ablation treatment apparatus, comprising:

an electromagnetic energy source;

a trocar including a <u>tissue piercing</u> distal end, and a hollow lumen extending along a longitudinal axis of the trocar;

a multiple antenna ablation device including a plurality of antennas positionable in the trocar lumen and deployable from the trocar lumen in a lateral direction relative to the longitudinal axis at a selected tissue mass, wherein the plurality of antennas includes a sufficient number of antennas to create an ablation volume between the antennas in the selected tissue site without impeding out the plurality of antennas when 5 to 200 watts of electromagnetic energy is delivered from the electromagnetic energy source to the plurality of antennas; [and]

an impedance monitor device coupled to the multiple antenna ablation device; and at least one cable coupling the multiple antenna ablation device to the electromagnetic energy source.

5UB -

36. (Amended) A method for creating a volumetric ablation in a selected tissue mass, comprising:

providing a multiple antenna ablation apparatus including a trocar with a trocar lumen and a trocar tissue piercing distal end, a plurality of antennas deployable from the lumen, and an electromagnetic energy source coupled to the plurality of antennas;

inserting the trocar into the selected tissue mass with the plurality of antennas positioned in the trocar lumen;
